

ABOUT ECOLOGICAL STANDARDS OF ANTHROPOGENIOUS LOADS ON NATURAL TERRITORIAL COMPLEXES

Yu.F. Kataevsky, G.G. Istomina, I.O. Pavlenko, V.V. Trishin

The geographical-informational system (GIS) is proposed to be used for estimation and prognosis of changes in structure and functional state of ecological systems which depends on levels of technogenous loadings. It will help in working out of ecological standards taking into account the demands to remain of enterprises profitability and minimise the damage after its activity.
