

## THE CONTEMPORARY RADIOECOLOGIC CONDITION OF CHERNOBYL NPP COOLING POND

**O.L. Zarubin, N.E. Shatrova, A.A. Zalessky, V.V. Derevetsc, A.B. Nazarov**

In 1999 the condition of the Chernobyl NPP cooling pond's ecosystem was studied. The data of  $^{137}\text{Cs}$  content in organs and tissues of different kinds of fish are presented. The change of  $^{137}\text{Cs}$  content correlation in different kinds of fish is shown in comparison with the data received earlier. The season dynamic of  $^{137}\text{Cs}$  content in fish's tissues was noted. The differences of  $^{137}\text{Cs}$  content in the fish according to the point where the samples were collected are shown.
